What I Build

End-to-End Flutter Apps	Full-stack mobile from Figma to Play Store / App Store — architecture, UI, API integration, and deployment.
Real-time & Offline Apps	Apps that work without internet using SQLite/Hive with seamless background sync when connectivity returns.
BLE & Hardware Integration	Connecting mobile apps to Bluetooth devices — fat analyzers, thermal printers, IoT sensors.
Multi-App Ecosystems	Building 2–3 linked apps (customer + driver + admin, or farmer + society + HQ) from a single codebase.
Marketplace & Booking Apps	Service booking flows, real-time driver tracking, payment gateways, rating systems.
Enterprise Dashboards	B2B admin panels with live analytics, inventory control, QA tracking, and custom reporting.
